A Better Way to Deodorize Your Tank

Mason, Michigan - April 5, 2006 - CLS Systems announces an innovative chemical dispensing system for Recreational Vehicles toilets. The dispensing system is a non-electric chemical injector that controls and adds the correct amount of chemical with each flush. The key is the patented T-Valve which creates a vacuum to draw chemical from the reservoir and mixes with water passing to the stool.

With the correct amount of chemical with each flush, RV owners are helping the ecology as well as saving money. "To many RV owners are unsure how much chemical to use. Most put in four to five times the amount needed and it all goes down the drain." says, Carl Sumerix, Owner of CLS Systems.

The reason RV owners use a toilet chemical is for odor control. Blue Streak Chemical has a Baby Powder scent that deodorizes the stool as well as the bathroom. The system allows a pleasant scent and overall odor control with never having to worry about adding deodorant.

Blue Streak Dispenser and Blue Streak Chemical come with a 100% satisfaction guarantee. The Savings Begin Immediately! The dispenser and Chemical are available for purchase at many local dealers, or by calling 1-866-677-0994 or online at www.bluestreakchem.com.
